

## **FNSS Exhibits SABER 25 Remote Controlled Turret with its New Design for the First Time at IDEF2021**

FNSS is exhibiting the SABER 25 Remote Controlled Turret (RCT) with its new design at IDEF 2021. FNSS designed SABER 25 in 2018 as an R&D project, with its own resources, developed without being bound by a contract, considering the current and future security environment. SABER 25 RCT stands out as an effective system against Armoured Combat Vehicles and Armoured Personnel Carriers, together with armoured light tactical vehicles that are armed or loaded with explosives. The turret provides the effective and sensitive firepower needed by infantry and other friendly elements in the operation zone. SABER 25 RCT is also an ideal system to complement the firepower of the old generation personnel carrier and armoured combat vehicles in life extension modernization works.

SABER 25 RCT, which is the unmanned version of FNSS Sharpshooter and SABER single-man turrets, which FNSS has delivered to the armed forces of different countries in large numbers for many years; is a single-man, medium-calibre and electrically driven turret. Equipped with 25 mm dual-feed automatic cannon, 7.62 mm machine gun providing high firepower, and strike performance, the SABER 25 RCT can be integrated into all tracked and wheeled armoured combat vehicles from 4x4 to 8x8 with its optimized size and low weight.

The turret has the electrical drive and fire control subsystems are completely designed by FNSS.

The SABER25 RCT provides the expansion of the interior volume of the armoured combat vehicle by not having an ammunition box. It incorporates the latest technologies in turret propulsion, fire control, survivability and firepower.

The key features of SABER 25 RCT are;

- Being an unmanned turret
- The volume advantage it provides in the vehicle by not having an ammunition box
- Low size and weight
- Ballistic protection level that can be increased according to customer requirements
- High localization rate
- Having an open architecture (sensor systems such as acoustic warning, laser warning can be easily integrated into the turret).

## PROTECTED MOBILITY AT YOUR SERVICE!

### A GLOBALLY TRUSTED AND RESPECTED TURKISH DEFENCE COMPANY

FNSS is a globally recognized land systems company that specializes in designing and producing wheeled and tracked armoured combat vehicles as well as combat engineering vehicles, turrets and sustainability solutions. As the preferred solution provider of users in various countries, the Company has delivered thousands of armoured combat vehicles worldwide.

### ADDING VALUE THROUGH INNOVATIVE SOLUTIONS

Thanks to its competent and dynamic workforce, FNSS offers innovative solutions throughout the entire product life cycle; from the design phase to the end of service life. Ever since the first roll-out in 1990, the Company has continuously improved its vehicle design and production capabilities in line with the requirements of its users. FNSS' KAPLAN class tracked armoured product family and PARS wheeled armoured vehicles are poised to shape new generation combat vehicle trends well into the 21st century.

### MEETING USER EXPECTATIONS

FNSS designs and develops customized solutions to meet the requirements of each user. The key to FNSS' success in delivering tailored products within requested time frames lies in its flexible approach to project management. This is complemented by its ability to orchestrate an extensive supply chain and a wide range of global partnerships. FNSS has successfully engineered and supplied numerous products addressing unique requirements. These vehicles have been designed, manufactured and delivered to armies worldwide by FNSS' user-centric business models and tailored solutions.

### BUILDING THE FUTURE WITH CONFIDENCE

FNSS products have been challenged by countless user endurance tests in the toughest conditions, and have proven themselves in combat missions. FNSS views user satisfaction as a permanent concept, and strives to ensure that its products serve beyond their life cycles by addressing any emerging needs throughout their use. FNSS also makes a difference by generating significant value for its international users through localization packages that include employing local labour, establishing domestic supply chains, and providing in-country training and technology transfer. Building upon its over 30 years of heritage in the defence industry, FNSS continues to add value to its users by creating innovative solutions.
